

# Paige™

## Extending System Capacity In-Between Visits.

Supporting equitable, continuous, and operationally efficient home care at scale.

Cleverly disguised as a familiar dementia clock, Paige™ is a secure video solution that provides digital access where traditional tools fail. It is purpose-built for high-need, excluded populations. Paige helps providers bridge the gap in-between visits, enabling earlier recognition of condition changes and strengthening circle-of-care coordination.

### The Structural Gap in Care

Care and support often disappear in-between scheduled visits. Limited visibility, fragmented communication, and workforce constraints create access gaps, risk exposure, and preventable escalation.

- **In-Between Visit Blind Spots:** Changes in condition or engagement go unnoticed until escalation occurs.
- **Access for High-Need Clients:** Clients with cognitive decline, low digital literacy, mobility limitations, or limited caregiver support are often excluded by traditional digital tools.
- **Reactive Family & Care Coordination:** Reassurance calls and fragmented updates increase workload without improving continuity of care.
- **Delayed Intervention & Escalation Risk:** Unanswered check-ins and declined visits reduce the ability to prevent avoidable ED visits or readmissions.

### Demonstrable Value to Funders

Enhances provider performance within fixed contracts while advancing funder priorities. Extends visibility between visits, protects sustainability, reduces administrative burden, and strengthens early intervention.

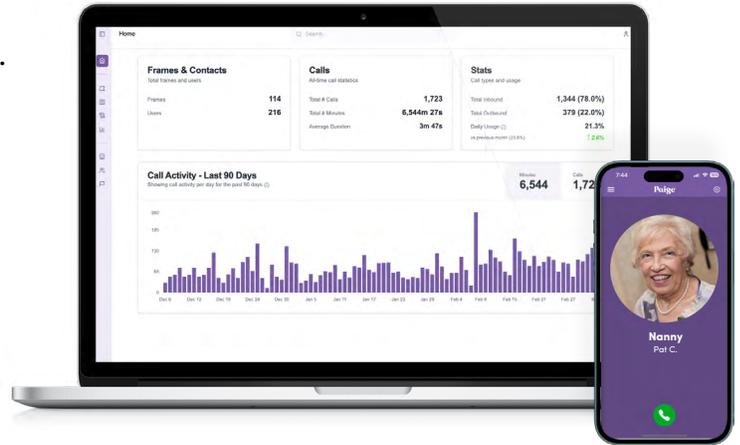

- **Stronger RFP Positioning:** Demonstrates continuity, inclusion of high-need populations, and proactive risk management aligned to funder objectives.
- **Protected Contract Sustainability:** Extends service impact without adding staffing costs, supporting margin stability within fixed funding models.
- **Reduced Administrative Burden:** Decreases reassurance calls and fragmented communication, freeing staff to focus on higher-value care.
- **Measurable Continuity & Engagement:** Provides documented evidence of ongoing client connection and timely escalation beyond scheduled visits.

## The Infrastructure for Continuous Care

One platform that streamlines communications for the entire circle-of-care, built to help simplify one of the hardest parts of aging-at-home – staying connected.

- **Paige Frame** – enables frictionless video calls for high-need and digitally excluded populations.
- **Paige Connect** – a secure, invite-only companion app that allows family members and frontline staff to manage contacts, device settings, and make or receive video calls.
- **Paige Cloud** – a centralized desktop console for care professionals to manage device deployment, monitor engagement, and initiate video calls. Supports EMR, scheduling, and billing integrations.

## Health System Alignment

Paige strengthens home care by extending capacity beyond scheduled visits, enabling providers to advance equity, reduce avoidable escalation, and support preventative, community-based care within existing funding models.

Care Closer to Home

Equity & Inclusion

System Capacity & Sustainability

“She melts when she sees the babies... and the pets. And her kids. But especially the babies.”

– Chantel

For clients like Chantel’s 102-year-old mother, Paige provides a secure window into the family circle, reducing isolation and allowing providers to achieve high-impact social outcomes.
