

## The one-touch video calling device.

Cleverly disguised as a familiar large-format dementia clock, Paige is a simple and secure video communication solution that makes it effortless for caregivers and older adult family members to connect. By removing the barriers of complex technology, Paige strengthens family bonds and reduces isolation for those who may have “aged out” of technology.

### The Paige Advantage for Homecare Providers

Homecare providers face mounting pressure to deliver high-quality care with limited resources. Older adults often struggle with complex devices, creating barriers that leave families anxious and staff stretched thin. Paige bridges this gap by offering a simple, reliable, and scalable solution that empowers providers to stay connected while reducing operational strain.

**Elevate Client and Family Satisfaction** — Reduce anxiety and strengthen a client’s circle-of-care by connecting them to friends, family, and care providers.

**Enhance Care Quality** — Augment in-person visits with virtual wellness checks, enabling more frequent and cost-effective client engagement.

**Boost Operational Efficiency** — Reduce time spent on phone coordination with families and communication with clients, ensuring your team's time is spent on hands-on care, not on the phone.

### The Paige Advantage for Retirement Community Operators

Retirement communities succeed when residents feel engaged, families feel reassured, and staff are free to focus on care. Yet, facilitating communication is time-consuming and often frustrating for everyone involved. Paige makes video calling effortless, creating stronger resident satisfaction, easing staff workload, and giving operators a clear advantage in a highly competitive market.

**Cultivate Community & Connection** — Boost resident well-being and happiness by enabling effortless, frequent connections with family, reducing isolation and providing peace of mind.

**Streamline Staff Workflow** — Simplify staff routines and free up valuable time by eliminating the need to use laptops or apps to facilitate video calls and family check-ins.

**Increase Per-Resident Revenue** — Increase revenue with a low-friction, high-value service that provides a clear advantage in a highly competitive market.

### Built for Today, Ready for Tomorrow

Paige is more than just a communication device; it’s an in-home hub that lays the groundwork for future innovation. Its powerful architecture is capable of supporting remote patient monitoring, A.I.-powered clinical assessments and insights, and an expanding partner ecosystem, allowing you to create new revenue streams and scale high-quality care.
